

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (original): A method for treating a fabric article comprising the steps of:
  - a) placing the fabric article in a container having an opening and at least one wall that defines an interior void space;
  - b) raising the temperature and relative humidity of the air within the interior void space of the container to a predetermined first temperature and a predetermined first relative humidity for a predetermined first period of time; and
  - c) changing at least one of the temperature or the relative humidity of the air within the interior void space of the container at the end of the first period of time to a predetermined second temperature and a predetermined second relative humidity for a predetermined second period of time.
2. (original): A method according to claim 1, wherein said fabric is contacted with a pre-treatment composition prior to being placed within the container of step a).
3. (original): A method according to claim 1, wherein said contacting occurs by spraying.

4. (original): The method according to claim 1, wherein vapor is used to raise the temperature and relative humidity of the air within the interior void space of the container.
5. (previously presented): The method according to claim 1, further comprising the step of allowing the temperature within the interior void space to decrease to a third temperature wherein the third temperature is less than about 45°C.
6. (original): The method according to claim 1, wherein the container further comprises:
  - a) a heating element
  - b) a humidity provider, preferably a passive humidity controller capable of changing and maintaining the relative humidity of the air within the interior void space of the container;
  - c) a vent and/or filter; and
  - d) an air circulation device.
7. (original): The method according to claim 6, wherein the container further comprises an active temperature controller capable of changing and maintaining the air temperature within the interior void space of the container.
8. (original): The method according to claim 6, wherein the container further comprises a passive humidity controller capable of changing and maintaining the relative humidity of the air within the interior void space of the container.
9. (original): The method according to claim 6, wherein the vent remains open at all times.

10. (original): The method according to claim 1, wherein vapor is introduced into the interior void space of the container comprises water and a perfume.

11. (original): The method according to claim 6, wherein the air circulation device is a fan and the fan inlet is within the interior void space of the container so that at least a portion of the air within the void space of the container is recirculated.

12. (previously presented): The method according to claim 1, wherein the first temperature is at least about 45°C.

13. (original): The method according to claim 1, wherein the second temperature is greater than T as defined by the equation:  $T = 60 - (0.17 * RH_2)$ , wherein  $RH_2$  is the second relative humidity in percent.

14. (previously presented): The method according to claim 13, wherein  $RH_2$  is of at least 50%.

15. (previously presented): The method according to claim 13, wherein the second temperature is less than about 45°C.

Claims 16-32 (canceled)

33. (previously presented): The method according to claim 1 wherein a cartridge containing a cleaning and refreshing composition is introduced into the interior void

space of the container and the cleaning and refreshment composition is released from the cartridge into the interior void space of the container.

Claims 34-35 (canceled)

36. (previously presented): The method according to claim 1 wherein the garments are stretched or tensioned prior to the start of the cycle.
